

Bridging the Automation Gap

Nearly every organization has started automating their GRC processes. Almost none have finished.

The research in our second annual [State of Continuous Controls Monitoring Report](#) reveals that **95% of organizations have implemented some degree of automation in their GRC processes**, but **only 4% have achieved full automation**. That 91-point gap represents the messy middle ground for organizations caught between the manual compliance processes that can't scale and the fully automated future they're trying to reach.

What's Being Fully Automated First?

The Bottom Line:

Partial automation only delivers partial results — and it's costing organizations.

83%

report that manual compliance work causes moderate or major delays in meeting regulatory requirements.

Read the full report and discover the roadmap from aspiration to implementation.
