

NEXT-GENERATION CYBER GRC · CONTINUOUS CONTROLS MONITORING

Stop Auditing the Past. Start Monitoring Reality.

Cyber resilience isn't a checklist. RegScale's **Continuous Controls Monitoring** platform connects live cloud telemetry, security tools, and CI/CD pipelines directly to federal and commercial compliance frameworks—so you can see, understand, and react in real time.

The Need for Change

Two unstoppable macroeconomic forces are converging on cybersecurity leaders: **AI-accelerated adversary capabilities** and a **global regulatory revolution** demanding real-time proof. Point-in-time annual audits are now an active liability.

The 4 Big Problems We Solve

1

Compliance theater

Passing an annual audit doesn't stop ransomware or an APT. Configuration drift and unpatched CVEs sit exposed between audits.

RegScale: Controls are validated continuously against live telemetry, 24/7/365.

2

The audit fire drill

Sixty days before an audit, engineering stops building to screenshot AWS, GitHub, and Okta settings.

RegScale: Automated API ingestion pulls evidence continuously. The evidence locker is already complete when the auditor arrives.

3

Static documentation drift

SSPs live in Word and PDF. One new microservice makes a 500-page document obsolete.

RegScale: Packages are stored natively in machine-readable formats and update as infrastructure changes.

4

The DevSecOps chasm

Engineers ship through CI/CD while GRC works in spreadsheets. Compliance slows releases, so teams bypass it.

RegScale: Compliance as Code in the pipeline via CLI and GitHub Actions. Violations fail pull requests before production.

A Unified, Next-Gen Cyber Platform.

RegScale delivers one end-to-end continuous compliance and trust lifecycle across three pillars uniting continuous monitoring, real-time tool orchestration, and customer-facing trust verification.

1

RegScale CCM Platform

The operating system for Continuous Controls Monitoring.

- Continuous monitoring across 250+ frameworks
- RegML AI for cross-mapping and POA&M remediation
- Living, Machine-readable security and authorization packages

2

Orchestration Hub

The real-time integration backbone.

- 60+ connectors: AWS, Azure, GCP, CrowdStrike, Tenable, Wiz
- Real-time CI/CD pushes plus scheduled daily syncs
- SHA-256 evidence hashing for chain of custody

3

RegScale Trust Center

Compliance as a customer-facing sales accelerator.

- Live, verified security posture for customers and auditors
- Automated click-through NDA workflow
- Deflects 90% of manual security questionnaires

Measurable Results

93%

less audit
prep time

4x

faster
authorization

80%+

less manual
compliance work

\$1.1M+

annual gross
operational savings

“RegScale's focus on Continuous Controls Monitoring will become even more critical for organizations navigating increasingly complex regulatory requirements. RegScale's unique solution embeds the actual compliance checks into the digital workflows. This enables proactive management of regulatory obligations in near real-time.” – KEVIN MAGEE, GLOBAL DIRECTOR OF CYBERSECURITY STARTUPS
