

Cut Through the Complexity: Streamlining RMF and cATO

The federal government faces significant bottlenecks in the ATO process, with traditional authorization approaches that take 12-18 months and an ongoing ability to rapidly transition to continuous Authorization to Operate (cATO). As a result, agencies struggle to streamline the RMF process and accelerate digital transformation.

Imagine a world where cATO takes months instead of years, where audit prep time is slashed by 60%, and where GRC can seamlessly enable innovation instead of being an endless manual headache. It's not a pipe dream; it's the reality of how RegScale's automation-driven, DoD IL5-certified platform is transforming compliance while cutting down on paperwork, time, and cost.

RegScale Enables the Public Sector

Automated ATO and RMF Processes

- ✓ Automate every stage of the ATO and RMF lifecycle, from control implementation to ongoing reporting.
- ✓ Dramatically reduce the time it takes to achieve ATO using our AI for control authoring/auditing and built-in workflows.
- ✓ Move beyond periodic compliance checks and replace manual, 1- to 3-year control testing cycles with seamless continuous monitoring.
- ✓ Avoid the need for periodic re-authorizations and attain cATO faster.

Gov Agencies Win with RegScale

From the DoD to the DoE and other government agencies, RegScale is being used to streamline processes, accelerate the adoption of new cloud technologies, and more.

Faster Digital Transformation

- ✓ Ensure that government agencies can rapidly adopt innovative cloud services, stay ahead of threats and vulnerabilities, and maintain technological superiority.
- ✓ Achieve rapid certifications for NIST 800-53, CMMC, FedRAMP, and others.
- ✓ Significantly reduce the time needed to achieve and maintain authorizations. (One customer cut their ATO process by 9 months.)

CI/CD Pipeline Integration and Shift-Left Security

- ✓ Embed security and compliance checks into your CI/CD pipelines.
- ✓ Ensure that compliance is built into software from the outset, reducing vulnerabilities and speeding up deployment.

Future-Proof Security Posture

- ✓ Leverage Compliance as Code (OSCAL-native, OCSF, and SBOM) in on-premises, cloud, classified, and air-gapped environments.
- ✓ Adapt to evolving security threats and compliance requirements.
- ✓ Cloud-native, machine-readable, and self-updating capabilities.

Improved Efficiency and Lowered Costs

- ✓ Integrate new GRC automations into existing workflows (including single-click exports) to reduce operational costs and increase efficiency.
- ✓ Simply POAM and vulnerability workflows by integrating your scanning and security tools.
- ✓ Reduce manual effort and time spent on compliance tasks – while also ensuring continuous readiness and up-to-date documentation.

RegScale Government Procurement Contracts

RegScale CCM platform—which is FedRAMP High In-Process and DoD IL5 certified—supports federal agencies (DoE, USMC, Navy, and others) and government contractors through various procurement contracts, including GSA MAS, NASA SEWP V, and ITES-SW2. It also integrates with hundreds of industry-leading tools to provide seamless onboarding, continuous monitoring for cloud resources, and on-demand RMF artifact generation.
