Embracing Compliance-as-Code

As the first OSCAL-native Compliance-as-Code platform, RegScale helps your developers stay focused on coding and your compliance team stay always audit-ready. Seamless tech integrations help to bridge security, risk, and compliance across your organization and future-proof your security posture.

AI-Enabled Compliance: Smarter, Faster, Easier

Our RegML AI agents transform existing policies into comprehensive documentation, provide intelligent control gap analysis, improve the accuracy of control documentation by 80%, and foster audit-readiness and confidence.

A GRC Success Story

A major federal agency uses RegScale's CCM platform to support an enterprise-wide continuous authorization (cATO) program, standardizing the Risk Management Framework across 700 systems and 17 component agencies. The agency's goal was to establish automated pipelines to streamline documentation generation and to quantify and manage risk proactively. RegScale's scalability, rapid implementation, and seamless integration with existing security tools — combined with our strong partnership approach and low-code/no-code customization capabilities — led to an immediate 80% reduction in ATO-related expenditures. The agency has saved over \$144M to date with RegScale serving as the central hub for unified visibility and standardization.
