RegScale

ONE-PAGER

Compliance at the **Speed of AI**

RegML is RegScale's regulatory AI. It drafts security plans, scores controls, and answers questionnaires.

Supercharge your compliance program with RegML

Security plans, control statements, and questionnaires take most of a compliance team's time. RegML works on that content: it **drafts from the sources you choose**, **scores what your team wrote**, and answers requests with citations, while your team stays in control.

1 Save Time and Effort

- Draft control statements, policies, and reports from sources you already have
- Generate a full system security plan from questionnaire answers
- Plain-language explanations help newcomers become productive faster

2 AI-Enhanced Outcomes

- Score every control statement for completeness and quality before auditors do
- See suggested improvements to strengthen weak controls
- Map evidence files to the controls they support, with you confirming each match

3 Faster, Higher-Quality Programs

- Create and refine security plans, controls, and policies in one platform
- Answer security questionnaires with citations and confidence scores
- Turn a plain-language request into a draft report

4 You Stay in Control

- RegML drafts and suggests. Evidence Mapper matches save only when you confirm them
- RegScale runs the AI for every customer
- Nothing to set up and no model keys to manage

RegML is built into the RegScale platform. See the full toolkit on the back.

RegScale

ONE-PAGER

The Full RegML Toolkit

Ten AI capabilities built into the RegScale platform, from first draft to final answer.

1 Author Draft compliance content

1 SSP Author
Drafts control statements from the sources you choose

2 AI Generator
Drafts a full SSP from questionnaire answers

3 Control Author
Improves the statement for a single control

4 Policy Generator
Drafts policies from a plan's control implementations

2 Understand
Close knowledge gaps

5 Explainer
Rewrites a control in plain language

6 AI Assistant in Text Fields
Helps you write & refine text, with tracked changes

3 Assess
Score and map

7 AI Auditor
Scores each control statement for completeness & quality

8 Evidence Mapper
Suggests controls an evidence file supports. You confirm each match

4 Respond Answer and report

9 Response Automation
Drafts answers with citations and a confidence score

10 Report Builder
Turns a plain-language request into a draft report

10x staff productivity boost

80% increase in accuracy

92% less time to create new programs

Ready to get started?
