

Trust Center for FedRAMP 20x

Publish live KSI evidence and CR26
certification data in one place

Our Trust Center Meets CR26 Head-On

75%

Automation on turn-on,
out of the box

Instant KSI Automation

- Open Policy Agent (OPA)-backed packs cover the majority of KSIs automatically at turn-on
- Automation extends across every major cloud environment
- Bring-your-own OPA, or generate custom checks from plain language

46

Key Security Indicators
validated live

Live KSI Validation

- Attestations, pass/fail status, and evidence freshness in one view
- Deterministic OPA checks show the Rego rule behind every result
- AI-assisted scoring bridges gaps until OPA coverage is complete

95%

Reduction in
compliance effort

Collect Once, Map Everywhere

- One evidence sync maps across KSIs, Rev 5, CMMC, and CSF controls
- Rev 5 packages bridge in via one-click OSCAL import or document ingest
- No dual evidence maintenance between legacy and 20x programs

Built for 20x, Not Bolted On

RegScale's Trust Center is the purpose-built home for FedRAMP 20x and CR26: Key Security Indicators, attestations, validations, and the public trust page, all in one place. It runs on the same OSCAL-native platform RegScale used to earn its own FedRAMP High authorization. Continuous compliance isn't an add-on here — it's the architecture CR26 now requires of every provider.

THE READINESS WORKSHOP

A 40–60-minute working session, *not a demo*

Framing, a guided walkthrough of your path (net-new or existing Rev 5), a reverse-timeline build to your certification date, and a target start date on the calendar before you leave.

Are You Ready for the Easy Button?

A short readiness screen shows how much of your CR26 path RegScale can automate today, and where an implementation partner or independent assessor still needs to close the gap.

- ✓ Documented cloud-native architecture and boundary
- ✓ Centralized identity with SSO and MFA
- ✓ Centralized logging and monitoring across the stack
- ✓ Machine-readable evidence sources, not spreadsheets
- ✓ A recent SOC 2, ISO 27001, or FedRAMP assessment

Request Your Workshop

RegScale achieved FedRAMP High in 6 months with 95% less compliance effort — proof the Trust Center architecture works. VDR/VER obligations land December 7 for every certification path, Rev 5 and 20x alike, with continuous detection, response, evaluation, and agency reporting built in. Bring your current state to a workshop and leave with a dated plan to your certification date.
