

REGML AI AGENTS

Supercharge Your Cyber GRC.

Automate the toil. Invest in resilience.

RegML agents take the toil out of compliance, with a human in the loop, so budget and talent move from repetitive manual tasks to the work that actually builds operational resilience.

THE NEED FOR Change

Cyber-attacks move at light speed while compliance still runs on spreadsheets. **Detection and scanning are automated**, and cloud environments change faster than anyone can track. That **cadence mismatch** is where teams lose the race against risk, and manual compliance work consumes the budget and talent that should go to resilience.

Where Your GRC Budget Goes

SHIFT AWAY FROM

- Hand-writing assessment questions
- Manually drafting tests and remediation plans
- Grading questionnaires one answer at a time
- Rework caused by human error

SHIFT TOWARD

- High-judgment risk and control decisions
- Faster, more accurate assessments
- Remediation that reduces exposure
- Improving security posture and operational resilience

Measurable Results with RegML

95%

less effort and labor hours to generate and secure high-level framework packages

10x

boost in staff productivity

80%

improvement in accuracy

92%

less time to create new programs

Agentic AI, Purpose-Built for Cyber GRC.

RegML is built for audit and regulatory compliance, not adapted from a general-purpose enterprise tool. Humans stay in the loop: reviewers edit and approve what agents draft. Here are a few of the ways RegML can impact your workflows.

1

Assessment Questions

Generates lines of inquiry for an Assessment Plan from control and assessment context, instead of writing each question by hand.

2

Assessment Tests

Drafts assessment tests in the Lightning Assessment wizard, and catalog-level Security Control Test Plans at high-level, standard, or detailed granularity

3

Corrective Action Plans

Reads an issue and proposes remediation tasks, each with a suggested owner and due date, for users to adjust before creating.

4

Risk Control Mapper

Recommends which existing controls mitigate a risk, with a confidence score and rationale for each recommendation.

5

Risk Mitigation Plans

Drafts standalone treatment plans for any risk, based on user direction.

6

Questionnaire Review

Drafts per-question scores and reviewer feedback. Reviewers edit and approve instead of grading every answer.

What It Means for Your Team

CISO

Do more with less. RegML agents accelerate assessments, control mapping, risk mitigation, and questionnaire processes, freeing talent for high-judgment work and resilience.

Compliance Managers

Take the pain out of compliance. Agents handle toilsome work such as assessment questions, mitigation plans, and questionnaire reviews. Productivity rises and quality improves.
