Proactively manage risk and compliance and shorten time to remediation with RegScale and Tines

Joint solution brief

Making risk and compliance operations in real-time requires automation.

Today, security leaders are facing increasing pressure from regulatory demands, compliance requirements, and audits. Risk and compliance management is a manual process and the GRC tools they have access to are often costly and lack integration with other tools and no automated processes limiting the transparency needed to accurately assess security, risk, and compliance when making business decisions.

Together, Tines and RegScale offer technology to automate risk and compliance operations, reducing risk and overall costs to the organization.

Streamlining risk and compliance with Tines and RegScale automation.

Tines advanced workflows provide the ability to seamlessly monitor and collect evidence of incidents in tools across multiple technology stacks, including development, security, and IT which then automatically feeds the artifacts into RegScale to keep audit documentation always up to date.

The near real-time workflows feed into RegScale to provide security teams with accurate security, risk, and compliance posture driving transparency and better business decisions. Tines allows security teams to build complex workflows to meet the evolving security, risk, and regulatory landscapes.

Together, Tines and RegScale streamline risk and compliance management and ensure agencies can increase security, reduce risk, and increase compliance.

Benefits

RegScale customers can leverage Tines for workflow orchestration and automation—allowing customers to build complex workflows to continuously monitor and collect evidence in near real-time. This reduces the need for manual intervention and enhances the speed and precision of security, risk, and compliance management efforts.

Within Tines, users can seamlessly monitor and collect evidence of incidents in tools across multiple technology stacks, including development, security, and IT which then automatically feeds the artifacts into RegScale to keep audit documentation always up to date. The near real-time workflows feed into RegScale to provide customers with accurate security, risk, and compliance posture driving transparency and better business decisions.

USE CASES

Threat intelligence

Vulnerability management

Threat remediation

Real-time risk and compliance management

Scale compliance and auditability efforts

- Consistency and auditability saves tons of human hours with Tines at PathAI

- Reduction in audit prep and response time by 60% while reducing audit costs by up to 30% with RegScale.

Reduce time to detect and remediate

- 55% decrease in vulnerabilities with Tines at BCM

- Use event-driven triggers to automate threat response, reduce manual, error-prone and inefficient workflows, and strengthen security, reduce risk, and improve compliance with RegScale.

About Tines

Tines is a smart, secure workflow automation platform for security teams. The world's best companies — from startups to the Fortune 10 — trust Tines to power their mission-critical workflows. Whether automatically responding to and remediating events in real-time.

About RegScale

RegScale's AI-powered Continuous Controls Monitoring platform transforms GRC by automating compliance, reducing costs, streamlining processes, and integrating seamlessly into DevSecOps for faster, more efficient risk management.
