

Unlocking Extreme Automation Across Thousands of Frameworks with RegScale and UCF

Super-charge Compliance and Reduce Risk, Unlock Greater Insight and Accuracy:

Access the Most Comprehensive, Consolidated Compliance Library Available

Organizations have immediate access to over 1,000 mapped authority/regulatory content, 1,000,000+ individual mandates, and more than 10,000 common controls, ensuring they are well informed about all relevant compliance requirements and have comprehensive coverage of compliance requirements. Eliminate error-prone processes like manually copying controls into excel.

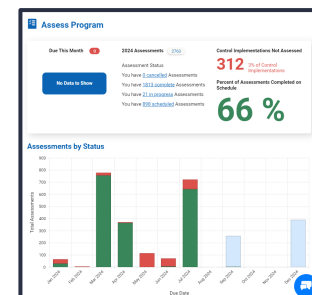

Enhanced Efficiency, Accuracy, and Cost Reduction

The strategic partnership provides a seamless integration of Unified Compliance’s library into RegScale’s platform provides a single source of truth for compliance management. This reduces the need for multiple systems, enhances data consistency, and reduces the risk of being out of compliance. Further, organizations save costs by reducing compliance management overhead and improving operational efficiencies. This integration simplifies the process of identifying, interpreting, and implementing regulatory changes and increases the ability to quickly become compliant against new standards and frameworks as they become required to maintain and grow the business.

Enable Real-Time Risk and Compliance Management

The partnership enables a unified approach to risk and compliance management. Create a more cohesive and efficient risk and compliance strategy, reducing the risk of non-compliance and enhancing overall governance. The partnership allows organizations to make informed decisions by easily seeing all risks across the organization and understanding how those risks impact the business.

“As the business changes and grows, so do the regulatory environments in which you operate. The strategic partnership between RegScale and UCF allows you to seamlessly stay ahead of new regulations and gain strategic focus for entering new markets by combining UCF’s comprehensive regulatory library and RegScale’s automated controls mapping.”

-Chief Scientific Officer, Co-Founder, UCF

Access the Most Comprehensive, Consolidated Compliance Library Available

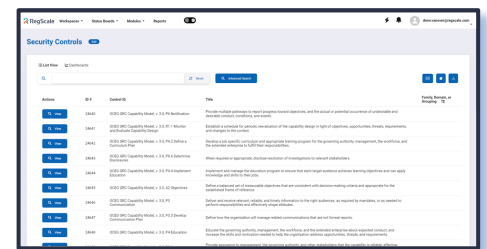

Unified Compliance’s expertise in regulatory research and RegScale’s advanced technology platform provide unparalleled access to expert knowledge and tools, ensuring organizations are well-equipped to navigate the complexities of regulatory compliance.

Stay Compliant with Increased Adaptability and Regulatory Change Management

The UCF-RegScale partnership offers a flexible model that can quickly respond to dynamic regulatory changes, ensuring that organizations remain compliant with minimal disruption to their operations. After a change has been identified, leverage UCF and RegScale to assess the impact, determine how to adjust the control environment, and implement the necessary changes.

Stay Ahead of Regulatory Changes with Horizon Scanning

Track and prepare for the regulatory changes and trends that will affect the market to ensure organizations are compliant and prepared. Leverage automation to precisely determine the impact of regulatory changes and to intelligently assign updates to policy and system owners to effectively coordinate responses.

Audit Automation with Compliance as Code

Single click conversion of frameworks to Compliance as Code via NIST OSCAL (Open Security Controls Assessment Language) enables organizations to generate OSCAL versions of all ATO/RMF artifacts with the click of a button. While working within RegScale’s real-time controls monitoring platform, organizations can generate audit-ready, on-demand documentation, using RegScale’s OSCAL export wizards. Support for Third Party Assessing Organizations (3PAOs) services includes generation of SAP/SAR in OSCAL significantly reducing the time and resources needed to conduct audits.

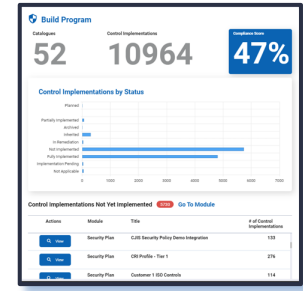

“Leveraging UCF’s extensive regulatory library within RegScale’s real-time compliance monitoring platform enables single click generation of audit-ready documentation on demand using RegScale’s OSCAL export wizards. Support for Third Party Assessing Organizations (3PAOs) includes generation of SAP/SAR in OSCAL significantly reducing the time and resources needed to conduct audits for all UCF managed frameworks.”

-Travis Howerton, Co-Founder and CEO, RegScale

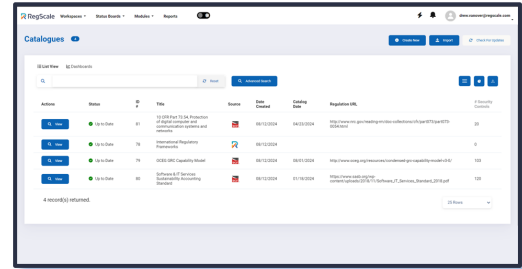

Cross Framework Gap Analysis Highlights the Impact of Regulatory Changes to Your Unique Environment

Leveraging UCF and RegScale organizations can quickly identify gaps across multiple frameworks giving the most accurate view of their compliance and risk posture. This gap analysis highlights new gaps as existing frameworks are revised allowing organizations to accurately identify the impact of updated regulations to their environment.

RegScale + UCF Brings Unparalleled Scale to Global Compliance Organizations

- **Creation of common controls** with minimal effort to meet compliance mandates for over 1,000 frameworks
- **Automatic mapping** of controls across frameworks
- **Single click conversion** of frameworks to Compliance as Code via NIST OSCAL
- **Mapping controls** to entity types, by leveraging CCM to continuously assess control status
- **Continuous monitoring for real-time control status**, driving proactive risk and compliance management
- **Automatically calculated compliance scoring**, using weighted formulas, highlighting the overall compliance posture for a given control or domain
- **Reporting and visualization** of impacts across control frameworks (compliance, policy, and risk)

RegScale and UCF Revolutionizes Compliance Management

Overcome the limitation of time, friction, and accuracy of legacy GRC. Leveraging RegScale and UCF customers gain true automation across highly complex and dynamic IT environments combined with unfettered access to thousands of regulatory frameworks.
